

Navigating the VoIP maze with technology from Orchid.

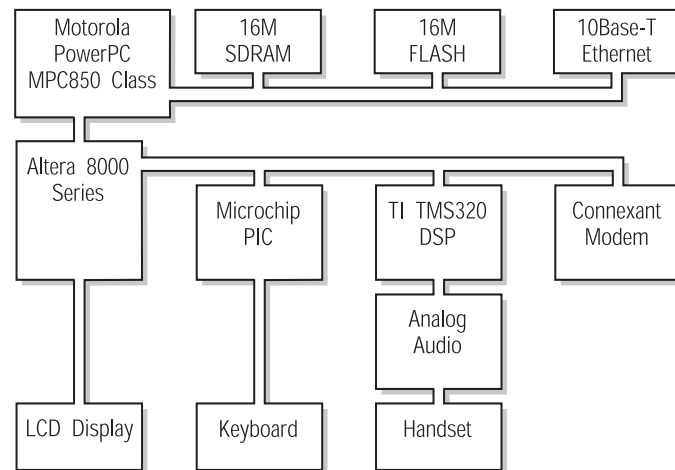

Voice over Internet Protocol is a rapidly emerging telecommunications technology with great promise. Orchid Technologies performed the electronics design of this early VoIP hardware solution for an emerging provider of telecommunications equipment. Hired to *'get it working yesterday'*, Orchid delivered prototype units in ten weeks from project start.

## Linux Operating System

PowerPC and Linux form a powerful Internet-ready technology alliance. Leveraging PowerPC and DSP technology produced success in record time.

## Integrated Technology Solutions

Working with technology from Motorola, Microchip Technology, Texas Instruments, and Altera, Orchid synthesized a single channel VoIP solution into a state of the art compact, manufacturable package.

## Customized Telephony

Call Orchid today. We're ready to design a highly integrated technology solution for you too.
